

Value Delivered

- ✓ Real-time web-based data access—anywhere, anytime
- ✓ Internal & external benchmarking
- ✓ Advanced modeling tools
- ✓ Collaborative reports & solutions
- ✓ Compatible with cyber-security requirements
- ✓ Alert notifications for off-normal conditions via text or email
- ✓ Automated reports delivered in standard or custom formats at any specified frequency
Reports delivered instantly via email
- ✓ Enhanced collaboration through easy access & secure sharing of plant or fleet data for multi-site utilities

Industry Challenge

Turning raw data into functional knowledge and sharing that knowledge seamlessly within the organization is indisputably an industry best practice. Remote Manager is a powerful, interactive platform for monitoring plant or fleet process data via automated reports or web browser.

ChemStaff Solution

ChemStaff delivers practical yet innovative solutions to meet this challenge. The expert technicians at ChemStaff combine chemistry data and plant process computer data to develop and automate advanced reporting tools, which even include industry benchmarks. With our data sharing technologies, information becomes more functional. We can compile and instantly disseminate reports as often as desired, emailing them directly to key personnel for immediate use. For enhanced plant management, individual data alerts can also be set up to notify personnel of any off-normal conditions. ChemStaff works diligently with plant personnel to:

- ✓ Establish data transfer
- ✓ Configure Remote Manager
- ✓ Set up automated reports (such as CEI, fuel reliability, and daily parameter tracking)
- ✓ Create alerts

We also understand needs evolve, so any additional reports or engineering solutions can be added to the platform at any time.
